### Bio

I am a backend developer with strong strategic and analytical skills. I focus on creating innovative solutions and have a methodical approach to problem-solving. Adaptable and collaborative, I enjoy working with teams to build efficient and scalable applications.

### SKILLS

---

- **Technologies:** Nodejs, NestJs, Express, Javascript, Typescript, Html5, Css3, MongoDB, PostgreSQL, Mongoose, Prisma, Swagger UI
- **Tools:** Git/Github, Netlify, Render, Vscode, Npm/Yarn, Cloudinary
- **Languages:** Yoruba, English

### Projects

---

**Task Management Api**—[Github](#) :I have developed a full-featured API for task management with CRUD functionalities, integrating user authentication, authorization, and task prioritization. I implemented role-based access control for different user types, ensuring secure data handling

**Blog Website Api**— [Github](#):I have designed and implemented an API for a blogging platform with features for post creation, editing, and commenting. This project includes user authentication and authorization, as well as pagination, filtering, and search functionalities to enhance user experience.

**Vendor Management Api**—[Github](#):Built an authentication and OTP verification functionalities to streamline vendor registration and management. I implemented an allocation system to match vendors with job opportunities, allowing admins to manage projects effectively. This project is continuously expanding with additional features to improve efficiency and user experience.

## Education

---

**Computer Science,Hnd**, Yaba college of Technology

## Experience

---

### Freelance Dec 2022-PRESENT

- **Backend Development:** I have created and optimized backend services for clients using Node.js, focusing on performance and scalability. I integrated advanced data processing with both SQL and NoSQL databases to support high-traffic applications.
- **API Documentation:** I have developed and documented APIs using Postman and Swagger UI to facilitate smooth front-end integration and testing processes, reducing onboarding time for client developers.
- **Database Management:** I have structured and managed databases in PostgreSQL and MongoDB, optimizing queries and ensuring secure and efficient data storage and retrieval for diverse applications.
- **Deployment and Maintenance:** I have deployed applications on cloud platforms like Netlify and Render, monitoring server performance and optimizing resource usage for cost efficiency.
